WORK EXPERIENCE

Evold

Feb 2024 - Dec 2024

Junior Software Engineer

Remote

- **Integrated** Google and Apple Wallet functionality and **enhanced** event management **automation** by implementing **dynamic** ticket-selling configurations, resulting in a **20%** click rate within the first week of launch and significantly improving the user booking experience.
- Automated environment variable management, reducing backend development time and manual workload by 40%, improving efficiency in Agile workflows.
- Built a robust reporting tool allowing users to **generate, save, and schedule** event-specific reports with extensive configuration options. This feature became one of the **most-used** site functionalities, with **60%** of users leveraging it to optimize operations, **increasing profitability** and earning **client praise** for its **value** and **usability**.
- Integrated **Amplitude** analytics into the website to **monitor** and **analyse** user interactions, providing valuable insights into user behavior and engagement to inform data-driven decisions.
- **Contributed** to developing and rigorously testing a **remote calculator service**, ensuring high-accuracy computations and seamless integration into site operations.
- Supported **developing** and **testing** key features, including refund management, donations, and enhanced order data storage, improving data tracking and functionality.

Frontend Simplified - Certificate - Website - GitHub

Jan 2023 - Apr 2023

Frontend Developer Intern

Remote

- Enhanced **user experience** by implementing **responsive design** and dynamic animations, increasing interactivity and user engagement.
- **Optimized** the **loading** time by implementing efficient **API** requests and **collaborating** with a virtual team using **Git**-based collaboration tools.

PROJECT EXPERIENCE

Review My Project

Website - GitHub

- **Developed** a **social networking** website with core **CRUD** functionalities and robust user authentication mechanisms. Enabling users to **create, like, and comment** on posts, fostering **interactive** engagement and enhancing the overall user experience.
- Employed rigorous **testing** methodologies and **optimized** website **performance** to drastically **improve** load times, reducing them from 36s to 2s achieving a **94%** decrease in load time. Accomplished this by implementing **caching, compression**, optimizing database queries, and leveraging Cloudinary for **efficient** media management enhancing website speed, minimizing database storage, and significantly boosting user satisfaction.

Nexora (In Progress)

Website

Technologies: Next.js, NestJS, PostgreSQL, Firebase Authentication, MongoDB, Redis, GraphQL

- Designed a scalable backend (NestJS, GraphQL, PostgreSQL, MongoDB) to handle millions of users with modular architecture and optimized data queries.
- Developed core features including user authentication, post and blog management, and dynamic content loading to enhance user engagement.
- Designed a reusable high-volume likes system, leveraging Redis for real-time processing and efficient storage to support millions of interactions.
- Implemented a resume analyzer with core data extraction capabilities, with AI-powered features under development.

EDUCATION

University of the People

Pasadena, CA

Bachelor's degree in Computer Science.

Apr 2023

- **Relevant Coursework:** Software Engineering, Data Structures & Algorithms, Data Mining and Machine Learning, Web Programming, Mobile Applications, and Computer Systems.

SKILLS

- **Programming Languages:** JavaScript (ES6+), TypeScript
- **Frontend:** React, Next.js, Angular, Three.js, Tailwind CSS, Material-UI, Shadcn
- **Backend:** Node.js, NestJS, GraphQL, REST API
- **Databases & Storage:** PostgreSQL, MongoDB, Firebase, Redis
- **Testing & Tools:** Jest, Postman, Git
