Full-Stack Engineer | Media Systems & Web Infrastructure

## WORK EXPERIENCE

### KlipFlow — Independent SaaS Product — Founder & Lead Engineer (Aug 2025 – Present | Remote)

- Built a browser-based video editor SaaS with multi-track timelines, subtitles, transitions, keyframe animations, and **FFmpeg**-based composition pipelines.
- Architected **distributed media processing pipelines** including frontend editor, backend orchestration, and rendering infrastructure.
- Implemented asynchronous rendering with **job queues and batch processing** to reduce CPU contention and optimize compute cost.
- Developed a **React + TypeScript frontend** with Tailwind and ShadCN for real-time editing and complex media state management.
- Deployed production infrastructure with **Docker, CI/CD, monitoring, and analytics** for performance tracking and reliability.
- Optimized **FFmpeg pipelines** for animated subtitles, overlays, and high-quality exports, balancing speed and compute efficiency.
- Applied system design patterns: **caching, pagination, UI virtualization, delayed write batching**.
- Built an **AI-driven podcast-to-shorts system** with smart cropping and content-aware segmentation, generating platform-optimized clips for TikTok, Reels, and YouTube Shorts.
- Implemented **multipart upload pipelines** for large media files, **JWT-based authentication**, delivered media via **Cloudflare CDN**, and monitored containerized workloads using Docker and Portainer.
- Acquired **200+** users in the first month without paid marketing, validating early product demand.
- Deployed AWS infrastructure on EC2 with AMI-based rollout strategy, IAM role-based security, security groups, and CloudWatch monitoring/alarms for reliability and observability.

### Outlier AI — Software Engineer (AI Training Data, Freelance) (May 2025 – Present | Remote)

- **Annotated, evaluated, and curated** high-quality training data for AI models, focusing on frontend code generation tasks and real-world UI scenarios.
- Performed **systematic assessment** of AI-generated code, identifying edge cases, logical inconsistencies, and alignment gaps to improve model reliability.
- Designed and executed structured evaluation workflows to benchmark model outputs against usability, accessibility, and production-readiness standards.
- Generated production-grade **Golden Responses** to serve as ground truth data for supervised learning and model fine-tuning.
- Contributed detailed feedback loops and labelling guidelines to enhance dataset quality, model alignment, and overall training efficiency.

### Evold — Software Engineer (Feb 2024 – Dec 2024 | Remote)

- Integrated Google and Apple Wallet increasing CTR by 20%.
- Built reporting system adopted by 60%+ users.
- Refactored media uploads using DigitalOcean Spaces improving scalability.

## PROJECTS

### Nexora — Full-Stack Engineer

- Architected backend using NestJS, GraphQL, PostgreSQL, MongoDB, and Redis for scalable social interactions.
- Designed Redis-based likes system with batching.
- Achieved 100/100 Lighthouse scores via caching, lazy loading, code splitting.
- Fixed Google Search Console indexing issues.

## EDUCATION

- University of the People — B.S. in Computer Science (Apr 2023 | Remote)

## SKILLS

- **Frontend:** React, Next.js, Angular, Three.js, Tailwind CSS, Material UI, ShadCN UI.
- **Backend:** Node.js, NestJS, GraphQL, REST APIs, PostgreSQL, MongoDB, Firebase, Redis.
- **DevOps & Tools:** Docker, CI/CD, Vercel, Supabase, Backblaze, Git, Jest, Postman, AWS.
