

EXPERIENCE

– Frontend Simplified Certificate Website GitHub	Jan – Apr 2023
Frontend Developer Intern	Sydney, AUS (Remote)
• Enhanced website UX by implementing dynamic animations and transitions, resulting in a 30% improvement in user satisfaction. • Optimized the loading time by 20% through efficient API requests using Axios and collaborated with virtual team trough Git-based collaboration tools.	
– Evold	Feb 2023 – Oct 2024
Junior Software Engineer	Khouribga, Morocco (Remote)
• Integrated Google/Apple Wallet functionality, delivering a seamless and efficient ticketing experience for users. • Implemented dynamic start and stop selling dates for tickets, improving flexibility and automation in event management. • Designed and developed middleware to dynamically generate GraphQL APIs using environment variables, enhancing backend efficiency. • Leveraged Firebase Remote Config to manage environment variables strengthening website security, and streamlining configuration across environments. • Built a robust reporting tool enabling users to generate event-specific reports and schedule them with customizable frequency, start, and stop dates. • Contributed to the development and rigorous testing of a remote calculator service, ensuring accurate and efficient calculations for site operations. • Supported the development and testing of major features, including refund management, donations, and enhanced order data storage, leading to better data tracking.	

PROJECTS

Review My Project (RMP)	Website GitHub
• Implemented essential CRUD functionalities, user authentication mechanisms, and interactive features such as liking and commenting, enhancing user experience. • Employed rigorous testing methodologies and optimized website performance by incorporating caching, compression, optimizing database queries, and utilizing Cloudinary for efficient media management to accelerate website speed, and optimize database storage by minimizing data size, and achieving a 98% decrease in loading times and enhancing overall user satisfaction.	
Movie heaven	Website GitHub
• Crafted Movie Heaven, a cutting-edge movie streaming application with a sleek and intuitive user interface using modern technologies such as Nextjs and Redux. • Incorporated Firebase for seamless user authentication and real-time updates, enhancing the overall user experience. Created a vast library of movies using the TMDB API allowing users to explore, discover, browse, and search movies effortlessly. • Prioritized responsive design with Tailwind CSS, ensuring a visually stunning and user-friendly interface across devices.	

EDUCATION

University of the People	Pasadena, CA
Bachelor's degree in Computer Science.	Apr 2023
Relevant Coursework: Software Engineering, Data Structures & Algorithms, Data Mining and Machine Learning, Web Programming, Mobile Applications, Computer Systems.	

SKILLS

Programming: HTML5, CSS3, JavaScript, Node.js, Python, React, Next, Angular, Express, REST API.

Tools: Postman, Jest, Redux, Material-UI, Tailwind CSS, MongoDB, Kivy, Pygame, NPM, Git.
